Foreword

The Saskatchewan economy performed well in 1986 in spite of deteriorating world economic circumstances. Our economic strength was even more remarkable considering that the province was just recovering from a two-year drought.

World commodity prices have tumbled in recent years due to market developments beyond our control. OPEC's new market strategy has cut oil prices in half while the new U.S. Farm Bill has further depressed grain prices. These developments have reduced provincial incomes and investment and threaten the basis for our future economic growth and prosperity.

I strongly believe that Saskatchewan people can adapt to, and succeed in, these changed world circumstances. We are builders in both good times and bad. There are many new opportunities arising from the fluidity in world markets. Our challenge is to work to capture the benefits of these changes for Saskatchewan people.

My government knows that people need some certainty in this period of global change. We have acted to protect people and industry from the damaging effects of these changed circumstances, to create the stable family and community basis for future diversification and development.

We have seen positive results in this difficult year of increasing international competition. Saskatchewan can and does compete. In 1986, we posted a record grain crop, opened our first gold mine in 40 years, set new uranium sales records and resumed potash sales to China. At the same time, the provincial unemployment rate has continued to fall.

The Saskatchewan Builds Program will take further advantage of the changing circumstances and transform the economy into a more vibrant and confident competitor in the world. Saskatchewan people can and will overcome our current problems and grow and prosper in this new world environment.

1986 in Review

In 1986, the Saskatchewan economy performed reasonably well in the face of difficult world market conditions. Growth was recorded in most sectors, the number of employed in the province rose, unemployment dropped, inflation eased and incomes increased.

World Economic Developments

The world economy changed in three important ways for Saskatchewan in 1986. First, prices for the province's two key exports — oil and wheat — dropped sharply during the first half of the year, causing major difficulty in the primary sectors of the Saskatchewan economy. In November, 1985, the Organization of Petroleum Exporting Countries (OPEC) changed its market strategy to secure market share rather than defend a higher price. This change caused oil prices to decline to below US$10/bbl early in 1986 from US$28/bbl in November 1985. Oil traded at about US$15/bbl at the beginning of December 1986. The 1985 U.S. Farm Bill cut the loan rate for wheat for 1986/7 by more than 25%, causing a corresponding fall in world wheat prices and Saskatchewan farm incomes.

Second, international trade became more competitive in 1986. The U.S. Export Enhancement Program, a program designed to capture lost market share, increased competition in wheat markets. U.S. lobby groups worked to block Canadian trade in softwood lumber, potash and uranium. Protectionist lobbies spread throughout the Western world in attempts to secure domestic employment.

Third, interest and exchange rates stabilized at more favourable rates at mid-year, supporting Saskatchewan's household sector. Chartered bank prime interest rates dropped below 10% in July, the lowest level in more than eight years. Other rates followed, with one-year residential mortgages dropping below 10%. The Canadian/U.S. dollar exchange rates stabilized in the 72 cent range at mid-year and became less volatile.

Overview of the Saskatchewan Economy in 1986

The record grain harvest in 1986 helped offset some of the difficulties resulting from deteriorating world circumstances. The farm sector led the Saskatchewan economy in 1986, posting a 34% increase in the volume of grain produced and employing an average of 4,000 more people than in 1985.

The non-farm economy was less buoyant. Oil exploration and drilling activity virtually ceased when world oil prices touched a low of US$10/bbl. Potash suffered from both excess capacity and low prices. Industrial investment slowed due to the weak resource outlook. Employment in the non-farm goods sectors dropped an average 2,000 for the first 11 months of the year.

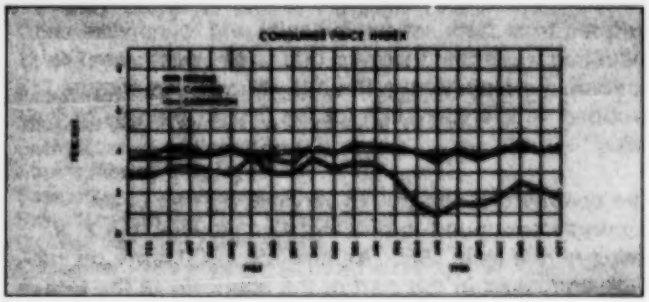
The commercial and public services portion of the economy continued to hire more employees, but at a reduced rate from 1985. An average 4,000 more people were employed in this part of the economy in the first 11 months of 1986. About 12,000 jobs were added to this sector during 1985.

Overall, employment rose an average 6,000 over the first 11 months of 1986. Although only about half the rate of growth in 1985, it is still significant given the economic circumstances. The relatively slow growth in jobs discouraged people from coming to the province while the lure of plentiful, high paying jobs in the booming Ontario economy encouraged many people to migrate from Saskatchewan. Between January and October in 1986, 11,900 more people left the province than entered. That compares with a net outflow of about 650 in the same period in 1985.

The unemployment rate fell 0.4 percentage points over the January-November period from the 8.1% average in 1985 as out-migration dampened growth in the labour force. The jobless rate for mature workers — aged 25 years and over — averaged about 6% for the first 11 months and dipped below 5% in several months, the lowest rate in more than four years. The youth jobless rate fell throughout the year.

Consumer price inflation remained moderate during the year. The overall index of consumer prices in Regina rose an average 2.1% in the first 10 months of 1986, compared with a 3.7% annual rise in 1985. A gas price war caused transportation costs to dip slightly while the opening of Super Store and the resulting

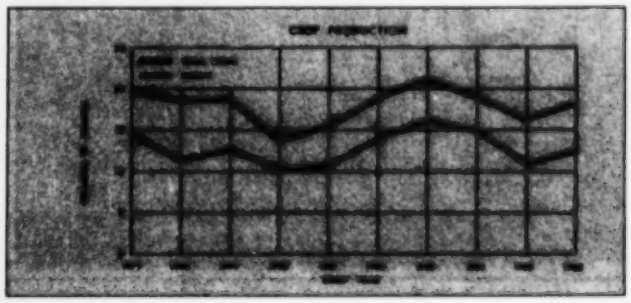
competition caused food prices to drop 1.6% for the year. Saskatoon prices rose 4.1%, faster than the 3.5% increase in 1985, because of stronger housing prices and the end of a food price war in the city. On average, prices rose by 4.1% across Canada.



Agriculture

Agriculture led the economy in 1986. After two years of drought, farmers welcomed better growing conditions. 1986 started well, with farmers seeding a record 30.4 million acres to the major crops, up 2% from the 1985 seeded area. Another 2.5 million acres were cultivated for specialty crops and tame hay. Summerfallow declined 5% to the lowest acreage since 1952.

The season progressed well and about 60% of the crop was harvested when poor weather hit in mid-September. The grain harvested by then was top quality, with about 90% of the wheat expected to be in the top two grades. The rest of the crop was left in swaths in the field for about three weeks in September, reducing quality and yields. Statistics Canada estimates that 25.8 million tonnes of the six major grains and oilseeds were harvested. About 56% of the spring wheat crop graded in the top two grades. Given the large harvest, that translates into a large increase in high quality wheat available for sale.



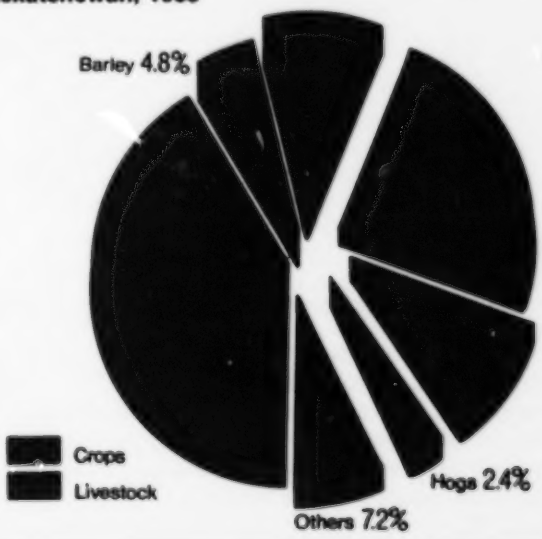
Unfortunately for Saskatchewan farmers, prices have dropped sharply. The U.S. Farm Bill forced the Canadian Wheat Board to cut its initial payment on #1 CWRS wheat to $130 per tonne for the 1986/7 crop year, down 19% from the $160 per tonne initial price for the crop year ended on July 31, 1986.

The Saskatchewan livestock industry improved its situation during 1986. About 1% more slaughter cattle were marketed during the January-September period and feeder shipments to Saskatchewan farms and feedlots rose 44% over the period. Prices improved sharply over the July-September period while feed prices declined, improving the profitability of livestock production. The number of cattle on farms at July 31, 1986, was virtually unchanged from 1985 while the number of pigs on farms held steady at the 11-year high reached in 1985.

Several provincial and federal government assistance and stabilization programs supported farm incomes. Farm incomes were depressed by a smaller final payment on the 1984 crop, the small 1985 crop available for sale in the 1985/6 crop year and by the sharply lower prices on the 1986 crop. Saskatchewan farmers received in 1986 about $240 million from Crop Insurance, $480 million from the Western Grain Stabilization Fund, $42 million under the Oil Royalty Refund Program, $125 million in livestock cash advances and $1.1 billion in loans at 6% interest rates.

Together, these support measures sustained cash flow during the critical seeding period and supported farm incomes. Agriculture Canada estimates that total farm cash receipts dropped 1.6% in 1986 to about $4 billion. Total farm expenses are estimated to have held steady at 1985 levels, leaving farmers with $635 million realized net farm income, down from $699 million in 1985. In December the federal government announced it will provide $1 billion of assistance to Canada's export agriculture early in 1987.

Distribution of Farm Cash Receipts by Commodity, Saskatchewan, 1985



Minerals and Forestry

A sharp drop in oil prices dominated the petroleum sector. Oil field activity remained strong through the first quarter of the year as firms worked to take full advantage of the federal Petroleum Incentive Program payments. During the first quarter, 617 oil and gas wells were drilled in the province, compared to the 782 wells drilled in the same period in 1985. PIP grants ended on March 31 while world oil prices continued to fall, bringing a halt to much of the drilling in the province. The provincial Oilfield Employment Program introduced in May helped the industry maintain activity. Another 414 oil and gas wells were drilled over the April-November period. As of November 28, a total of 1,031 wells were drilled. Provincial land sale revenues dropped to $16.1 million for the first three sales, compared with a record $148.6 million for the four quarterly sales in 1985.

The news was not all bad in the oil patch. In spite of lower prices, oil production in Saskatchewan was virtually unchanged from 1985 during the first ten months of the year. Home Oil drilled a successful deep well near Estevan. The well is one of the largest single producing oil wells in Saskatchewan's history. Estimates place initial production at 750 barrels a day, well above the provincial average of 16 barrels a day.

Construction began in September on the NewGrade heavy oil upgrader to be integrated with the Consumer's Co-operative Refinery in Regina. The $650 million project will create an estimated 3,000 person years of construction employment and 80 permanent jobs when the upgrader begins operation in 1989.

Natural gas development continued during the year. Saskatchewan Energy and Mines estimates that sales rose about 25% while prices remained steady. Saskatchewan Power Corporation increased its use of Saskatchewan supply. Several permits were issued to export gas to industrial customers in Ontario, in exchange for company guarantees to invest in exploration and development in the province. As of November 28, the industry had completed 227 gas wells.

Potash production and sales were dampened by poor financial conditions in the prime market areas. Production slipped 6% during the January-September period to 4.4 million tonnes. Sales exceeded production by about 460,000 tonnes between January and September and matched the volumes moved during the same period in 1985. The world market has a serious overhang of excess capacity, causing prices to dip as low as US$60/tonne during the year. The Kalium and Lanigan Phase II expansions were virtually complete by year-end.

North American potash sales continued weak but there were a number of new contracts in the off-shore market. China re-entered the market in 1986. Canpotex improved its market share, largely due to intensive market development efforts. CIDA and Canpotex announced they will co-operate to build a demonstration pilot bulk blending fertilizer plant in China next year. Canpotex is also using innovative shipping arrangements to reduce transportation costs and increase returns for the Saskatchewan industry.

Uranium production rose a further 15% during the first three quarters of 1986 as the Key Lake mine operated above rated capacity for several months. Sales continued to climb as the increased output from Key Lake mine entered the market. Spot prices firmed during the year and ended October in the US$17/lb. range.

Gold exploration and development activity continued at a busy pace north-east of La Ronge. Construction of the Star Lake mine was completed in mid-November and testing of the mill began. Star Lake — employing 55 on-site workers — will be Saskatchewan's only producing gold mine. Several other properties are at an advanced exploration stage and production decisions are anticipated early in 1987.

The forestry sector had a reasonably good year. In June, PAPCO was sold to Weyerhauser Canada Ltd. The company will build a $250 million paper mill in addition to modernizing the existing pulp mill. Another major development during the year was the 15% countervailing duty imposed on Canadian shipments of softwood lumber by the U.S. Trade Commission. If the countervail is upheld in 1987, profitability and activity in the Saskatchewan industry could be hurt as producers scramble for domestic markets.

Employment in the mining, oil drilling and forestry sector was flat to marginally higher during 1986. Increased employment in the forestry and uranium sectors, combined with good first quarter employment in the oil sector, largely offset weakness in potash and the slower oilfield activity after March.

Construction

Non-residential building was sharply lower during the year due to the weak outlook in the primary resource sectors. The Statistics Canada Public and Private Investment Intentions Survey indicated that private industrial firms planned to invest only $2.4 billion, down 6.5% from 1985. The largest drop was in the mining and farm sectors. The government and

institutional sector planned to invest about $635 million during the year, up 10% from 1985.

Housing investment was weaker in the first part of the year. About 3,769 new residential units were started between January and September in all parts of the province, down from 4,023 units in the same period in 1985. Urban starts were virtually unchanged from 1985 while rural starts fell by 18% during the period.

The Saskatchewan Home Program was introduced in September. The new $1500 matching grants and $10,000 low interest loans for renovation caused building activity to increase. At the end of November, about 69,000 applications had been received, covering $67 million in grants and more than $168 million of home renovation activity. Construction employment rose above year-earlier levels in October and November for the first time since January. For the year as a whole, employment in the construction sector was down about 1,000.

Manufacturing

The total value of shipments from all manufacturing industries rose 1.7% in the January-September period. The value of refined oil shipments dropped with world prices, dampening the rise in the total value of manufacturing shipments in 1986. The actual volume of shipments from all enterprises rose during the first nine months of 1986. Printing and publishing, metal fabricated materials, machinery and chemical product shipments all posted increases greater than 10% during the same period.

A number of new industrial ventures will add to the depth and strength in the manufacturing sector. The Gainers hog plant in North Battleford and the new chill tunnel in the Intercontinental Packers plant in Saskatoon will increase output in the slaughtering industry. Other new developments include the Vanguard mobile home factory in North Battleford, the Hitachi turbine plant in Saskatoon and the wire and cable and the hopper bin plants in Moose Jaw.

Manufacturing employment fell an average 2,000 in the January to November period due to extended layoffs in the farm machinery, wood, and steel plants and the layoff of all production workers in the Northern Telecom plant in Saskatoon.

Services Industries

Activity also slowed in the commercial services sectors. Financial services continued to rationalize through the year as The Bank of British Columbia closed the branches it had earlier acquired from Pioneer Trust. Employment in public administration (excluding Crowns, hospitals and schools) continued to decline.

On the plus side, transportation employment rose due to increased movement of grain. Wholesale and retail trade also marginally expanded employment in spite of closures of Dominion Stores in Regina and Saskatoon and the Eatons Store in Moose Jaw. Commercial and non-commercial services expanded.

Overall, employment in the services sector rose by 4,000 during the January-November period.

Incomes and Sales

Wage earners received increases in 1986. The average non-farm wage per employed person rose about 3.8% in the January-August period, in contrast to a decline during 1985. The 1986 increase in wages was slightly higher than inflation over the same period.

The impact of the wage increase on sales was dampened by weak farm incomes and higher taxes levied on income and property by local, provincial and federal governments.

Retail sales rose an average 6.3% for the first nine months of the year. The rise was led by strong auto sales in response to the attractive incentives offered by the North American auto makers and by double digit increases in sales of clothing and recreational stores. The dollar value of sales was depressed by lower prices for gasoline and food in Regina. Sales volumes were maintained in both sectors.

Prospects for Development

The changes in world commodity markets and trading relationships will create many opportunities for Saskatchewan producers to expand and diversify. The terms of trade have turned sharply against commodities, creating an ideal environment to expand and diversify the non-resource part of the economy.

The Saskatchewan Builds Program is designed to take advantage of these changed circumstances and break the economy's historical dependence on volatile resource markets. The Builds Program will secure markets for our existing resources, develop new and existing products for domestic consumption and export, increase the linkages between the primary sector and the rest of the economy and expand the services available to support the important primary export producers.

Saskatchewan Economic Accounts

The Saskatchewan Bureau of Statistics has developed a set of economic accounts which can be used to trace the development and growth of the Saskatchewan economy.

The purpose of the accounts is to measure the value of economic activity in each sector of the economy. This is done by means of a balancing set of accounts similar to the annual income and expenditure statements of a commercial enterprise.

The Accounts have many useful functions. They consolidate information which is now provided through a number of scattered sources and organize it into a central framework. This allows many kinds of economic analysis to be performed ranging from monitoring current economic performance to analysis of structural change in the economy.

The Saskatchewan Bureau of Statistics has available, upon request, many more detailed tables and other information concerning the Saskatchewan Economic Accounts.

1985 Saskatchewan Economic Accounts

Saskatchewan Gross Domestic Product (GDP) measures the total value of goods and services in the province. By removing the effects of inflation, it is possible to measure the volume of output.

In 1985 the economy grew by 4.9 percent. After adjusting for price changes, Saskatchewan's real Gross Domestic Product increased by 3.6 percent. Increases in the real value of the physical change in farm inventories, in consumer spending and investments in non-residential construction were the largest sources of the increase in real Gross Domestic Product between 1984 and 1985. Higher production (for all major crops except Durum) and lower deliveries of wheat, oats and barley relative to 1984 permitted additions to farm inventories compared to the depletions seen in 1984. These increases in farm inventory were partially offset in the farm sector by decreases in grain exports.

The volume of output for non-farm components of GDP increased by 5.3 percent. This growth was led by investment in the business sector particularly in mining. Saskatchewan's oil and gas industry continued to expand in 1985 with a record 3,848 oil and gas wells drilled.

NOTE: Work is now underway to incorporate into the Saskatchewan Economic Accounts Statistics Canada's historical revisions to many data series.
